

Release Notes

Release 18.1.6724 D 6/5/18

FirePrograms functionality changes and enhancements:

- A collapsed version of the Scheduling Module Payroll Report has been implemented which eliminates the regular shift appearing when an employee takes the entire shift off for a particular status. The regular assignment for that entire shift will no longer appear on the Payroll Report.
- New feature: Scheduling Module support for pay period warnings. Example: a warning can appear if an employee exceeds X number of hours in a particular pay period (such as a 28 day pay period).
- New feature: "Emergent" checkbox is now available for individual responding apparatus.
- New fields: "Water Used", "Foam A" and "Foam B" are now included in the Fire group of the incident form. "Water Used" is available on the Daily Log and Ad Hoc forms. "Manufacturer Job Number" is now on the Apparatus form.
- New Feature: "Out of Service" browsers are now on all asset, hydrant and facility forms.
