

Release Notes

Release 18.2.1 D 9/25/18

FirePrograms functionality changes and enhancements:

- New Asset Duplication functionality. After adding the first asset record (Supply Item, Equipment Item, Fixed Asset, Apparatus, Hose), the duplicate button in the asset browser will prompt for how many additional duplicate records are desired. The form will then prompt for Serial Number, Asset ID Number and Bar Code entry. Bar code scanners can be used to input that data into each column.
- The incident form has “Lookup Property” button that has been added in the location group (must be licensed for the Property module). When the address of the incident is entered, the Lookup Property button will find any properties that match that specific address. The property can be selected, linking it to the incident record.
- System Reports have new *selectable* filters for:
 - **Last X Years/Days/Hours** (where ‘X’ can be the desired number of Years, Days, Hours)
 - **Next X Years/Days/Hours** (where ‘X’ can be the desired number of Years/Days)
 - **Compare Last X Years to Date** filter will return data from the current period and prior periods to the selected calendar day.
 - For example: Last 3 Years to Date with a date of Sept. 19th will return data from the following date ranges:

([AlarmDateTime] is between '1/1/2018 00:00' and '9/19/2018 23:59')
Or ([AlarmDateTime] is between '1/1/2017 00:00' and '9/19/2017 23:59')
Or ([AlarmDateTime] is between '1/1/2016 00:00' and '9/19/2016 23:59')
Or ([AlarmDateTime] is between '1/1/2015 00:00' and '9/19/2015 23:59')
